What Do We Know About The Vaccine?

presented by

BARDS FMTM

Mission Statement

COUNTY BY COUNTY

County by County is a grassroots, patriot-led movement founded in FAITH and KNOWLEDGE that utilizes peaceful, bold, and loud engagement actions on a local and county level with the intention of returning America to her Constitutional Republic origins.

Introduction

“Patient rights and bioethics are impossible without true informed consent.”

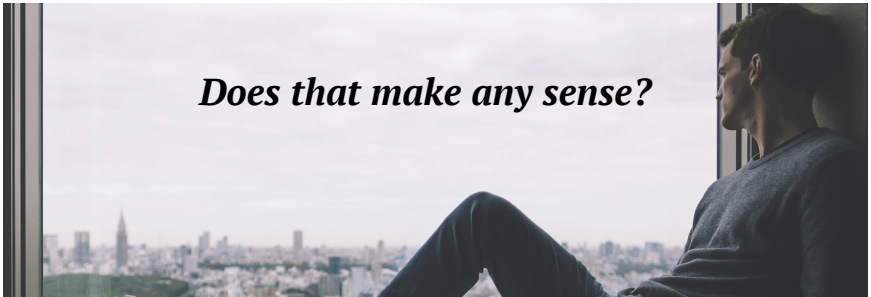

-MICHELLE MALKIN

The information presented in this pamphlet is sourced as of February 7, 2021. The statements herein are presented as verifiable information to the best of our knowledge given the data referenced, and is not intended to be an authoritative report. The intent of this presentation is to equip and urge you to pursue your own research to verify the information for yourself, so that you can draw your own informed conclusion about the safety and efficacy of the experimental vaccine.

A FDA Pfizer briefing paper released December 10, 2020, revealed **there were 43% more suspected COVID-19 cases in the experimental vaccination study group** than the group given a placebo.

Dr. Fauci and others have let us know that **even with the experimental vaccination, restrictions for social distancing, masking, etc., will not be lifted.** It’s a mutating virus. This experimental vaccine will be the first of many...

It is critical that we exercise logical thinking and start connecting the dots.

Does that make any sense?

Not FDA Approved

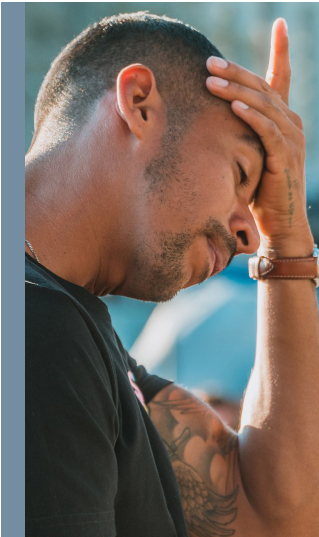

According to the FDA Fact Sheet¹

There is no U.S. Food and Drug Administration (FDA) approved vaccine to prevent COVID-19.

The Pfizer-BioNTech COVID-19 Vaccine is an unapproved vaccine that may prevent COVID-19.

The Pfizer-BioNTech COVID-19 Vaccine has not undergone the same type of review as an FDA-approved or cleared product.

Fast tracking a vaccine takes a minimum of 5 years. The **Pfizer COVID-19 experimental vaccine, not FDA approved, was authorized after just a few months.**

What?!?

NO animal testing was done, and in the human study, “Phase 3” was completely omitted. Only young, healthy people were studied. **NO** children, elderly, or pregnant women were in the study. **NO** long-term effects have been measured.

HOW EFFECTIVE IS IT?

The Vaccine Is Not As Effective As Your Immune System

The IFR (Infection Fatality Rate) of COVID-19 for people under 69 years old is **less than 1%**.

For children and adolescents, it is **0.003%**

Across all ages, the human immune system, on average has a **98%** effectiveness rate against the virus.

The Moderna COVID-19 vaccine is currently posting a 94.1 percent efficacy rate² and the Pfizer and BioNTech vaccine are showing a 95% efficacy rate.³

But Wait, There's More!

The FDA has allowed "effectiveness" to be defined as "prevention of mild symptoms."

The experimental vaccines do not claim to prevent asymptomatic COVID-19 infection⁴ or to last longer than one year.⁵

WHY SO
LOOSE
CDC?

America's Frontline Doctors

The vaccine is an experimental biological agent.

According to the FDA, “An investigational drug can also be called an experimental drug and is being studied to see if your disease or medical condition improves while taking it.” America’s Frontline Doctors (AFLD) has researched that Pfizer, Moderna, and AstraZeneca applications properly identify their vaccines as “investigational.”

There is no proof the experimental vaccine stops transmission.

You are enrolling in a clinical trial.

If you take a vaccine, you’re being enrolled in a medical trial and a pharmaco-vigilance surveillance system (contracted by the U.S. Department of Defense with Google and Oracle) in which you will be tracked for 2 years.

The experimental vaccine is an mRNA vaccine.

The technology used for the first Pfizer and Moderna COVID-19 experimental vaccinations uses a messenger RNA (mRNA) technique. This is an unprecedented application to a vaccination.

Racial Justice or Racial Target?

AFLD’s Dr. Simone Gold highlighted the disingenuous targeted racial messaging by the CDC, which calls for prioritizing the black community to receive the experimental vaccine as a racial justice. Studies have shown a higher risk of adverse affects in black individuals for certain vaccines. In light of this medical history, does it make sense to prioritize an experimental vaccine with un-studied and unknown outcomes for a group based on race?

This Just In: Not Safe For India?

America's Frontline Doctors (AFLDS) released a statement on February 5, 2021⁶ urging the Biden administration to immediately respond to the decision by Indian health officials to deny authorization for Pfizer's COVID-19 vaccine based on a lack of safety and efficacy evidence, according to a Reuters report.⁷

The American public deserves full transparency regarding the safety and efficacy of the vaccine in order to make an informed decision, don't you think?

By the way

"The decision means the vaccine will not be available for sale in the world's two most populous countries, India and China, in the near future. Both countries are running their immunisation campaigns using other products."

Oh.

No Accountability

Zero Liability? Let this sink in.

The pharmaceutical companies have been given **legal immunity** from liability.⁸ They have **ZERO liability** for any long-term effects of the vaccine.

Let this sink in for a moment. What could possibly go wrong? When there is no accountability, there exists opportunity for negligence, recklessness, shortcuts, departure from integrity and compliance, among many other potential risks.

Why should I care? This lack of accountability can yield a higher risk of vaccine injuries, and even death, as we are witnessing now.

Vaccine Deaths & Injuries

Citing CDC data, LifeSiteNews⁹ reported that as of January 22, **at least 271 deaths**, and **9,845 adverse events** have occurred after COVID vaccination so far in the U.S. The data indicates that the deaths, reported by the vaccine injury tracking system (VAERS)¹⁰ for the CDC, mostly occurred **within 48 hours** of the vaccine being administered.

A study shows only about 1% of actual cases are picked up by the VAERS system.¹¹

In Europe, Investment Watch Blog (IWB) reports,¹² about **730 deaths** and **8 cases of spontaneous abortion** has been recorded by EUDRA,¹³ Europe's tracking system, following Pfizer vaccination.

(The following deaths and injuries are cited in the LifeSiteNews report.)

Vaccine Deaths & Injuries

28yr old male, no pre-existing conditions.

Pronounced dead after being put on cardiac life support after being found “unresponsive at work,” two weeks after receiving the Pfizer vaccine.

88yr old female with arthritis and high blood pressure.

After experiencing pain in the back of her head and extreme headache, went into a coma and was intubated. A hole was drilled in her skull to relieve pressure. She suffered bleeding in the brain and an aneurism that led to her death 14 hrs after her initial symptoms.

An older Florida man with a “clean bill of health.”

Became sick 3 hours after the vaccine and was found deceased 1 day after his vaccination.

45-year-old mother.

Died “in the middle of the night” following vaccination with the Moderna vaccine the day before.

Nearly identical cases have been reported across the U.S.

4 elderly women in nursing homes.

VAERS notes the incidents of four elderly women, most of whom had survived COVID-19, all dying in nursing homes on the same day within hours of receiving Pfizer shots from the same lot.

8 unborn babies.

Eight unborn babies, many of them late-term and otherwise healthy, also were miscarried or stillborn soon after their mothers received the Pfizer vaccine, according to VAERS. **Pfizer has warned that “pregnancy should be excluded” before vaccination.**

VAERS also reports dozens, if not hundreds, of debilitating, non-fatal reactions to the vaccine, including seizures, cardiac arrest, and hemorrhage.

Get the Vaccine, Get Your Life Back?

According to Dr. Fauci, people will still need to wear masks, practice social distancing, and avoid large crowds even after getting the vaccine.

In a CNN interview with Jake Tapper, Fauci said, “Obviously, with a 90-plus percent effective vaccine, you could feel much more confident...But I would recommend to people to not abandon all public health measures just because you have been vaccinated,” because “even though, for the general population, it might be 90[%] to 95% effective, you don’t necessarily know, for you, how effective it is.”

CNBC reports, “it is worth noting that as the trials for both vaccines progress, efficacy numbers could change, **and it is also not yet clear how long any immunity would last.**”¹⁴

**So, get the vaccine, get your life back?
Nope.**

What Happened To The Flu?

CDC's Website States

Seasonal influenza activity in the United States remains lower than usual for this time of year.

2017

45 Million

The CDC said the “flu killed 80,000 people this past season and put 900,000 into the hospital, making it the worst influenza season in decades.”¹⁵

CDC estimates that the burden of illness during the 2017–2018 season was high with an estimated 45 million people getting sick with influenza.

2018

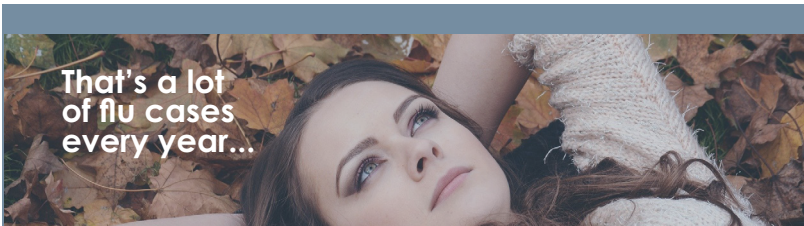

42.9 Million

In total, the CDC estimates that up to 42.9 million people got sick during the 2018–2019 flu season, 647,000 people were hospitalized and 61,200 died.

2019

39-56 Million

CDC estimates 39–56 Million illnesses and 24–62,000 deaths.

Except 2020

2020

1499

There are 1499 cases reported for the 2020–2021 flu season..

What happened to the flu?

According to the CDC, the “flu kills anywhere between 12,000 and 56,000 people a year, depending on how bad the flu season is, and that it puts between 250,000 and 700,000 into the hospital with serious illness.”¹⁵

Normal flu rates are 9,000,000–43,000,000.

The flu did not just disappear. Let this sink in.

What An Anomaly.

Do you really want to protect lives?

It's time to start asking questions,
and research for yourselves.
